# Advanced Programming

#### Exam 2018

#### Silvan Robert Adrian

#### November 4, 2018

#### **Contents**

_	0-10-0-10-0	
1	Question 1.1: Utility functions 1.1 Version	<b>1</b> 1
2	Question 1.2: Parsing appm databases2.1 Choice of parser library	1 1 2
A	Code Listing A.1 Question 1.1: handout/appm/src/Utils.hs	<b>2</b> 2
<b>1</b> Th	Question 1.1: Utility functions ne Code for this task is attached in the appendix A.1.	
1.	1 Version	
9	Question 1 2. Parsing appm databases	

# Question 1.2: Parsing appm databases

# Choice of parser library

I implemented the Parser for appm in parsec, mostly out of this reason:

- Better Error handling compared to ReadP
- I do have more experience with Parsec then ReadP

#### 2.2 Transform Grammar

The existing grammar has some ambiguities, like allowing many names, version etc. which now transformed to only allow once

```
Database ::= \epsilon
```

# A Code Listing

### A.1 Question 1.1: handout/appm/src/Utils.hs

```
module Utils where
   -- Any auxiliary code to be shared by Parser, Solver, or tests
   -- should be placed here.
   import Defs
6
   instance Ord Version where
8
     (<=) (V[]) _ = False
      (<=) (V(_:_)) (V []) = True
10
      (<=) (V[VN v1int v1str]) (V[VN v2int v2str]) =</pre>
11
        if checkVersion v1int v2int v1str v2str then True else False
12
      (<=) (V(VN __:xs)) (V(VN __:ys)) = V(xs) <= V(ys)
13
14
   checkVersion :: Int -> Int -> String -> String -> Bool
15
   checkVersion a b c d = a <= b \&\& (c <= d || length(c) <= length(d))
17
   merge :: Constrs -> Constrs -> Maybe Constrs
18
   merge [] [] = Just []
19
   merge c1 [] = Just c1
   merge [] c2 = Just c2
21
   merge (c1) (c2) = Just (c1 ++ c2)
```
